

WIPRO CAPSTONE PROJECT

Defect Report

BlazeDemo Flight Booking Automation Framework

Selenium WebDriver · TestNG · Maven · ExtentReports · Jenkins · Docker

Project Name	BlazeDemo Flight Booking Automation Framework
Document Type	Defect Report
Prepared By	Mr. Baivab Sarkar
Mentor/ Trainer	Mrs. Vaishali Sonanis
Application Under Test	BlazeDemo
URL	https://blazedemo.com/
Defect Tracker	JIRA [BLAZEDEMO]
Total Defects	7
Date	13 th June 2026

1. Introduction

This document summarizes the defects identified during functional testing of the BlazeDemo Flight Booking application. The issues were observed across various flight booking features and have been recorded in JIRA with relevant details such as reproduction steps, expected and actual outcomes, severity and priority to support defect management and resolution.

2 Defects Logged in JIRA:

DEF001 – Registration Pages Return 419 Page Expired Error

Field	Details
Defect ID	DEF001
Test Case ID	TC005
Test Case Name	Verify Registration Page
Module	Authentication Module
Severity	Critical
Priority	Medium
Raised By	Baivab Sarkar
Status	To Do

Description: Application displays "419 Page Expired" when attempting user registration. Users are unable to create new accounts.

Business Impact: New users cannot register in the application, making authentication functionality unavailable.

Preconditions

- Application is accessible.
- Registration page is available.
- User is not logged in.

Steps to Reproduce

- Launch the application.
- Click **Register**.
- Enter valid registration details.
- Click **Register** button.
- Observe the response.

Expected Result: User account should be created successfully and redirected to the appropriate page.

Actual Result: Application displays **419 Page Expired**.

BlazeDemo Flight Booking Automation Framework (BLAZE-1)

[BLAZE-13] Login and Registration Pages Return "419 Page Expired" Error

Created: 11/Jun/26 Updated: 11/Jun/26 Due: 15/Jun/26

Status:	To Do		
Project:	BlazeDemo		
Components:	None		
Affects versions:	None		
Fix versions:	None		
Parent:	BlazeDemo Flight Booking Automation Framework		
Type:	Bug	Priority:	Medium
Reporter:	Baivab Sarkar	Assignee:	Baivab Sarkar
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		
Attachments:			
Rank:	0 000cm:		
Start date:	08/Jun/26		
Sprint:	BLAZE Sprint 1		

Description

Impact

Users cannot access authentication features.
Login and registration both fail with a **419 Page Expired** error. This blocks users from signing in or creating an account.

Expected behaviour

- Login should authenticate the user successfully.
- Registration should create a new user account successfully.
- The user should be redirected to the appropriate page.

Actual behaviour

Application displays:

419

Page Expired

Steps to reproduce

- Open application.
- Click **Login**.
- Enter valid credentials.
- Click **Login**.
- Open application.
- Click **Register**.
- Enter registration details.
- Click **Register**.

Environment

- Application login and registration pages

Workarounds

DEF002 – Login Pages Return 419 Page Expired Error

Field	Details
Defect ID	DEF002
Test Case ID	TC006
Test Case Name	Verify Login Page
Module	Authentication Module
Severity	Critical
Priority	Medium
Raised By	Baivab Sarkar
Status	To Do

Description: Application displays "419 Page Expired" when valid login credentials are submitted.

Business Impact: Existing users cannot access the application.

Preconditions

- Application is accessible.
- Valid user credentials exist.

Steps to Reproduce

- Launch the application.
- Click Login.
- Enter valid credentials.
- Click Login button.
- Observe the response.

Expected Result: User should be authenticated successfully and redirected to the dashboard/home page.

Actual Result: Application displays **419 Page Expired**.

DEF003 – Booking Can Be Completed With Fields Left Blank

Field	Details
Defect ID	DEF003
Test Case ID	TC007
Test Case Name	Booking With Blank Mandatory Fields
Module	Purchase Module
Severity	Critical
Priority	High
Raised By	Baivab Sarkar
Status	To Do

Description: The application allows flight booking completion even when all mandatory passenger and payment fields are left blank.

Business Impact: Invalid booking records can be generated, resulting in compromised data integrity.

Preconditions

- Application is accessible.
- Flight search completed.
- Purchase page is displayed.

Steps to Reproduce

- Search and select any flight.
- Navigate to Purchase Page.
- Leave all passenger and payment fields blank.
- Click Purchase Flight.

Expected Result: System should display validation messages and prevent booking submission.

Actual Result: Booking confirmation is generated successfully.

Flagged:	Impediment
Start date:	08/Jun/26
Sprint:	BLAZE Sprint 1

Description

Impact

Users can complete a flight booking without entering required passenger information or payment details. This creates invalid booking records and compromises data integrity.

Expected behaviour

The system should validate mandatory fields and prevent booking submission when required information is missing.

Actual behaviour

Booking confirmation is generated successfully even when all passenger and payment fields are left blank.

Steps to reproduce

- Open BlazeDemo.
- Search for available flights.
- Select any flight.
- Leave all passenger and payment fields blank.
- Click **Purchase Flight**.

Environment

- Purchase Flight page
- BlazeDemo

Workarounds

DEF004 – Purchase Flight Form Does Not Perform Input Validation on Passenger and Payment Information

Field	Details
Defect ID	DEF004
Test Case ID	TC008
Test Case Name	Invalid Passenger Information
Module	Purchase Module
Severity	Critical
Priority	High
Raised By	Baivab Sarkar
Status	To Do

Description: The Purchase Flight form accepts invalid, numeric-only, and special-character inputs in passenger and payment fields without performing any validation.

Business Impact: Invalid customer and payment information can be stored in the system, resulting in poor data quality and unreliable booking records.

Preconditions

- Application is accessible.
- Flight search completed successfully.
- Purchase Page is displayed.

Steps to Reproduce

- Search and select any flight.
- Navigate to Purchase Page.
- Enter invalid data such as:
 - Name = @#\$%^
 - Name = 12345
 - City = 12345
 - State = @@@@
 - Credit Card = ABC123
- Click Purchase Flight

Expected Result: System should validate all passenger and payment information and display appropriate validation messages.

Actual Result: Booking confirmation is generated successfully.

Attachment:

Rank:	0 1000c6:		
Flagged:	Impediment		
Start date:	08/Jun/26		
Sprint:	BLAZE Sprint 1		

Description

Impact

The Purchase Flight form allows users to submit invalid, numeric-only, and special-character inputs across passenger and payment fields. The application performs no client-side or server-side validation before generating a booking confirmation.

Expected behaviour

The system should validate passenger and payment fields before a booking confirmation is generated.

Steps to reproduce

- Navigate to BlazeDemo.
- Search for and select a flight.
- Go to the Purchase Flight page.
- Enter invalid data in the passenger and payment fields, such as:
 - Name: blank
 - Name: 123456
 - Name: @#%\$%^
 - Address: blank
 - City: 12345
 - State: @@@@
 - ZIP: ABCDE
 - Credit Card: ABC123
 - Month: 99
 - Year: 2000
- Submit the form.

Environment

- BlazeDemo
- Purchase Flight page

DEF005 – Month Field Accepts Invalid Values Outside Valid Range

Field	Details
Defect ID	DEF005
Test Case ID	TC009
Test Case Name	Invalid Month Validation
Module	Payment Module
Severity	Major
Priority	Medium
Raised By	Baivab Sarkar
Status	To Do

Description: The Month field accepts values outside the valid range of 1–12.

Business Impact: Invalid payment information can be submitted and stored within booking records.

Preconditions

- Application is accessible.
- Flight search completed successfully.
- Purchase Page is displayed.

Steps to Reproduce

- Search and select any flight.
- Navigate to Purchase Page.
- Enter valid passenger information.
- Enter Month = 99.
- Click Purchase Flight

Expected Result: System should reject values outside the range 1–12 and display a validation message.

Actual Result: Booking confirmation is generated successfully.

Attachment:

The screenshot shows a form field labeled "Month" with the value "100" entered. The field is a rounded rectangle with a light gray border. The text "Month" is in a bold, orange font, and the text "100" is in a bold, blue font.

Attachments:	image-20260608-094338.png		
Rank:	0 j000ca:		
Start date:	08/Jun/26		
Sprint:	BLAZE Sprint 1		

Description

Impact

The Month field accepts invalid values. This can let users submit booking data with months outside the valid range.

Expected behaviour

Only values between 1 and 12 should be accepted.

Actual behaviour

Invalid values such as 0, 13, and 99 are accepted.

Steps to reproduce

- Navigate to Purchase Page.
- Enter Month = 0.
- Submit booking.

Environment

Purchase Page

Workarounds

DEF006 – Expired Year (1900) Displayed as Default Credit Card Expiry Year

Field	Details
Defect ID	DEF006
Test Case ID	TC010
Test Case Name	Expired Year Validation
Module	Payment Module
Severity	Medium
Priority	Medium
Raised By	Baivab Sarkar
Status	To Do

Description: The application accepts an expired year value (1900) in the credit card expiry year field.

Business Impact: Users can submit invalid payment information which may result in payment failures.

Preconditions

- Application is accessible.
- Flight search completed successfully.
- Purchase Page is displayed.

Steps to Reproduce

- Search and select any flight.
- Navigate to Purchase Page.
- Enter valid passenger details.
- Enter Year = 1900.
- Click Purchase Flight

Expected Result: System should reject expired years and display an appropriate validation message.

Actual Result: Booking confirmation is generated successfully.

Attachment:

A screenshot of a web form. At the top, the word "Year" is displayed in a blue, sans-serif font. Below it is a rectangular text input field with a thin grey border. Inside the field, the number "1900" is entered in a blue, sans-serif font, matching the color of the label above it.

Attachments:	image-20260608-094816.png
Rank:	0 000cc:
Start date:	08/Jun/26
Sprint:	BLAZE Sprint 1

Description

Impact

The Year field accepts an expired year. This can cause confusion for users when entering credit card details.

Expected behaviour

Should not accept an expired year as the Dedit/credit card year

Actual behaviour

1900 is accepted in the Year field when entered by the user

Steps to reproduce

- Open Purchase Page.
- Observe the Year field.

Environment

Purchase Page

- Priority: Medium

Generated at Fri Jun 12 06:29:57 UTC 2026 by Baivab Sarkar using Jira 1001.0.0-SNAPSHOT#100291-rev:fc7a4733e5b961216b9bf0a12338994ae0045171.

DEF007 – Mandatory Fields Are Not Visually Identified

Field	Details
Defect ID	DEF007
Test Case ID	TC011
Test Case Name	Mandatory Field Indicator
Module	Purchase Module
Severity	Minor
Priority	Low
Raised By	Baivab Sarkar
Status	To Do

Description: Mandatory fields on the Purchase Page are not visually marked as required.

Business Impact: Users may not know which fields must be completed, leading to confusion and reduced usability.

Preconditions

- Application is accessible.
- Flight search completed successfully.
- Purchase Page is displayed.

Steps to Reproduce

- Search and select any flight.
- Navigate to Purchase Page.
- Review all labels and input fields

Expected Result: Mandatory fields should be clearly identified using visual indicators such as an asterisk (*) or "Required" label.

Actual Result: No mandatory field indicators are displayed.

Attachment: NA

Description

Impact

Mandatory fields are not visually identified on the Purchase Page. Users may not know which fields are required.

Expected behaviour

Mandatory fields should be clearly indicated.

Actual behaviour

No required-field indicators exist.

Steps to reproduce

- Open Purchase Page.
- Review form labels.

Environment

Purchase Page

DEF008 – Credit Card Number Field Does Not Enforce Minimum and Maximum Length Validation

Field	Details
Defect ID	DEF008
Test Case ID	TC012
Test Case Name	Credit Card Length Validation
Module	Payment Module
Severity	Major
Priority	High
Raised By	Baivab Sarkar
Status	To Do

Description: The Credit Card Number field accepts card numbers that are shorter or longer than valid card number lengths.

Business Impact: Invalid payment information can be accepted and stored, potentially causing transaction failures.

Preconditions

- Application is accessible.
- Flight search completed successfully.
- Purchase Page is displayed.

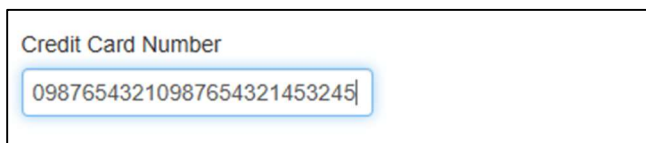

Steps to Reproduce

- Search and select any flight.
- Navigate to Purchase Page.
- Enter valid passenger details.
- Enter invalid card numbers:
 - 123
 - 09876543210987654321
- Click Purchase Flight

Expected Result: System should reject card numbers that do not meet the minimum and maximum length requirements.

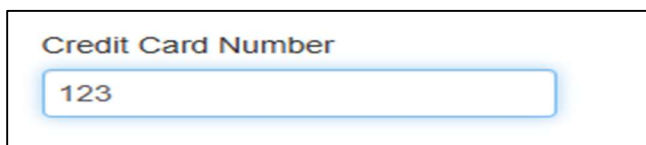

Actual Result: Booking confirmation is generated successfully.

Original estimate:	Not Specified		

Attachments:			
Rank:	0 j000cd:i		
Start date:	08/Jun/26		
Sprint:	BLAZE Sprint 1		

Description

Impact

Users can enter credit card numbers that are too short or too long and still complete the booking. This can lead to invalid card data being accepted.

Expected behaviour

The card number should meet the minimum and maximum valid length requirements.

Actual behaviour

Short or large card number accepted.

Steps to reproduce

- Enter Credit Card Number = 123 or Card Number = 09876543210987654321
- Complete booking.

Environment

N/A

Workarounds

6. Conclusion

A total of **8 defects** were identified during testing of the BlazeDemo application across the Authentication, Purchase, and Payment modules. The defects include authentication failures, missing input validations, and UI usability issues. These issues impact system functionality, data integrity, and user experience
